Our Vision

Give medical professionals the online tools needed to manage native medical images in a collaborating environment.

Our Strategy

Providing access to a cloud-based platform (www.doctys.com) where medical, dental and para-medical practitioners can join, view, manipulate, and exchange patient raw data on medical images they use or generate.

Our Products

Doctys is a unique cloud-based solution that allows healthcare professionals to work collaboratively with native (raw data) medical images in one application – no matter the complexity and the location.

- As a Medical images silo, the platform manages native medical images of any size from any source (Dicom, Digital pathology files, 3D stl models …). The complete set of raw data is uploaded on the secure Doctys server. The system's powerful tools can create, edit, copy, paste, resize, import, and export images. Study folders can be created, and medical reports can be shared.

- As a Document editor, the platform can generate reports with images and use customised templates for specific pathology.

- As a Communication tool, its integrated platform can make a request to a peer, give access to images and documents, order medical exams, direct messaging, and support video discussion on a case.

  - It is used for expert opinions, second opinions and primary readings (tele-radiology, tele-pathology, tele-dermatology etc) but also for several dental applications like intra-oral scans, 3D modelling, etc.to improve the quality of patient care and substantially reduce the time to answer a request.

  - Doctys eliminates the cumbersome jungle of different presentations, allowing evryone to upload all type of images and results securely and directly into a single solution.

  - Universities and scientific organisations can use Doctys to store and interpret files and anonymise interesting cases for teaching purposes (e.g., create papers and lectures).

- As an Economic tool, it integrates payment and accounting functions for professionals who offer services for a fee.

Doctys is a single-click, one-login solution in a secure and legal GDPR environment.

Our Users, Our Market

Doctys is a growing, integrated, multi-specialty community of professionals around the world.

Artificial intelligence processes can be plugged into Doctys to enhance the user experience of hospitals, imaging centers, and labs around the world.

Our Business model

Minimal fee per user per month   will give full access to all the online tools, including Image management, communication, invoicing, document and workflow management. as well as access to the online community to exchange and invoice your services.

Doctys will charge an additional % accounting management fee to its users who bill for their services on the system.

Our Future

Becoming the preferred medical imaging platform for a significant portion of the world's medical community.
